EDUCATION

Syracuse University

Bachelor of Science in Computer Science | GPA: 3.78

Syracuse, NY

Expected May 2027

EXPERIENCE

Undergraduate AI Research Intern

Leibniz Lab, Syracuse University — advised by Prof. Shakarian

Spring 2026 – Present

Syracuse, NY

- Developed the LLM component of **VulReasoner**, an ARPA-H UPGRADE-funded **automated reasoning** system for cybersecurity vulnerability analysis
- Contributed to **PyReason**, an open-source neurosymbolic reasoning library used by academic and industry researchers, authoring tutorials and Python wrapper scripts that translate natural language into PyReason's annotated logic syntax via LLM prompt pipelines

Undergraduate Research Assistant

School of Information Studies, Syracuse University

May 2026 – Present

Syracuse, NY

- Conducting structured participant data collection for the study on human perception of AI Companion, contributing to a research pipeline that supports peer-reviewed publication

Undergraduate Research Assistant — VR Development

Department of EECS, Syracuse University

Jan 2026 – Present

Syracuse, NY

- Built and iterated on a Unity/C# VR training simulation, implementing particle systems and collision detection to model semiconductor cleanroom contamination scenarios end-to-end from design through deployment
- Presented working build to the NSF-affiliated Q-SUCCEED-CNY workforce program (Micron partnership), gathering live user feedback from students/ career-changers training for semiconductor roles

PROJECTS

WatchToRead — Cloud-Deployed AI Content Pipeline | *Python, Flask, Claude API*

Spring 2026

- **Designed and deployed** serverless full-stack pipeline on Google Cloud Run converting YouTube transcripts into 8–9 page PDF eBooks in under 30 seconds, owning the full lifecycle from design through deployment and ongoing operations
- Architected modular service design with single-responsibility modules for transcript extraction, LLM processing, and PDF rendering

Lancely — College Student Freelance Marketplace | *Flask, React, SQLite, REST API*

Spring 2026

- Owned backend architecture for a college freelance marketplace in a 4-person Agile team; designed and implemented the RESTful Flask/SQLAlchemy API, real-time polling for messaging, and a two-step job completion flow across 11 sprints

Personal Finance Dashboard | *Python, Flask, React, SQLAlchemy, REST API*

Fall 2025

- Built full-stack dashboard parsing 900+ real credit card transactions across banks, resolving inconsistent sign conventions and date formats through a unified data normalization pipeline
- Designed RESTful Flask API and rule-based categorization engine achieving 92% accuracy across 7 spending categories, reducing uncategorized transactions from 85% to 8% via iterative keyword tuning and edge-case debugging

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, C#, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Flask, Tailwind, SQLAlchemy, pandas, PyTorch

Cloud & Infrastructure: Google Cloud Run, Docker, Git/GitHub (PR workflow, code review), Linux, CI/CD fundamentals

Databases: PostgreSQL, SQLite, SQL query design and schema modeling

AI/ML: LLM APIs (Anthropic Claude, OpenAI), prompt engineering, Promptfoo evaluation, neurosymbolic reasoning (PyReason)
